

# Quick Start Guide

CommzGate Messaging Server v4

# Welcome!

This User Guide takes a visual approach to introducing you to the COMMZGATE Messaging Server. The entire guide will take about 10 minutes to cover.

For support requests, visit: <http://support.commzgate.com>

# Some Terminology

## **MT: Message Terminate**

Refers to a messages sent to a mobile device

## **MO: Message Originate**

Refers to a message received from a mobile device

# Installation for Windows

- Unzip the COMMZGATE\_Messaging\_Server\_v4.x-win.zip package to an installation location of your choice and double-click the installer.

# Installation for Linux

- Extract the `COMMZGATE_Messaging_Server_v4.x-linux.tar.gz` package to an installation location of your choice  
eg. `/home/joe/` or `/usr/local/`
- The extracted directory contains the following structure  
`apache-tomcat bin conf db-derby log sys`
- To start COMMZGATE, via terminal, cd to `bin` and execute  
`./commzgate_ctl start`

Once COMMZGATE is started, you can safely exit the terminal. COMMZGATE will continue to run as a server process.

The next section shows you how to login via the Web Interface.

- To stop COMMZGATE, execute  
`./commzgate_ctl stop`

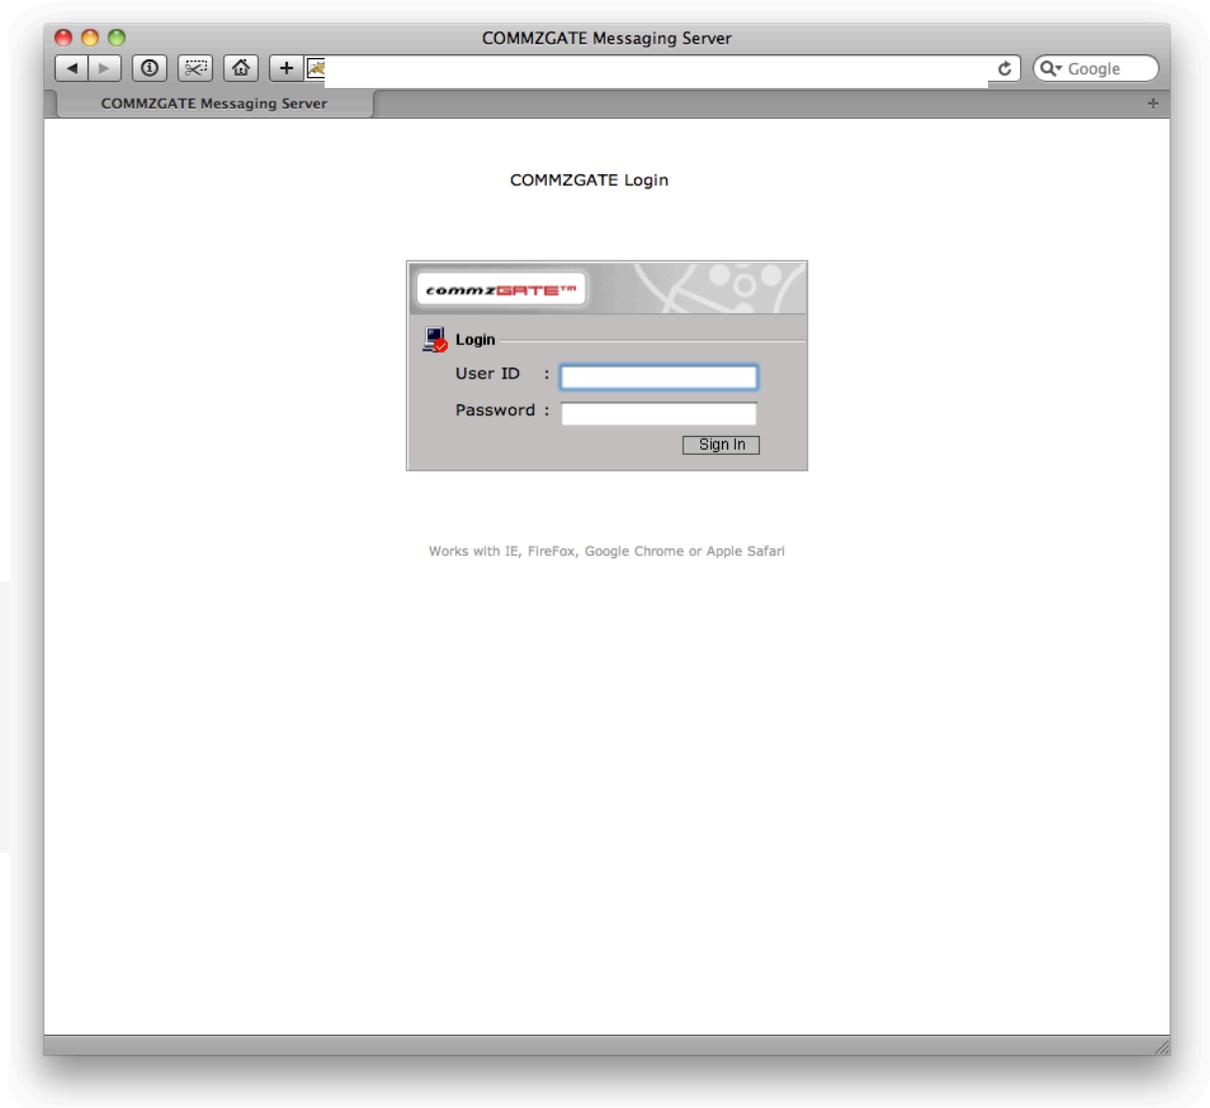

# Login

Upon installing COMMZGATE, proceed to the login page using any up-to-date web browser at <http://<IP>:8080/commzgate/>

*where <IP> is 127.0.0.1 if you have installed COMMZGATE locally on your machine, else this is the IP address or domain name of the server you have made the installation.*

The default User ID is : admin  
The default password is : commzgate

Please change both User ID and Password to your own values immediately upon login.

# Dashboard

**Dashboard** is home page you see upon login. It provides an overview of the system status, as well as shortcuts to common functions.

This is the main navigation menu. Each item will be covered in the following pages.

The status of the COMMZGATE background process. This must be GREEN in color for all features to work.

The list of user sub-accounts you have created. Each sub-account can login and access.

# SMS Apps: Messenger

**Messenger** is an easy-to-use feature for sending messages via the Web interface to pre-configured recipient groups.

Enter the message to be sent here. Supports long concatenated messages of up to 10 SMS parts.

You can choose to enter recipient mobile numbers manually with each number on its own line OR by selecting from your pre-configured Recipient Groups.

Set the message to be sent at a later date and time, instead of immediately.

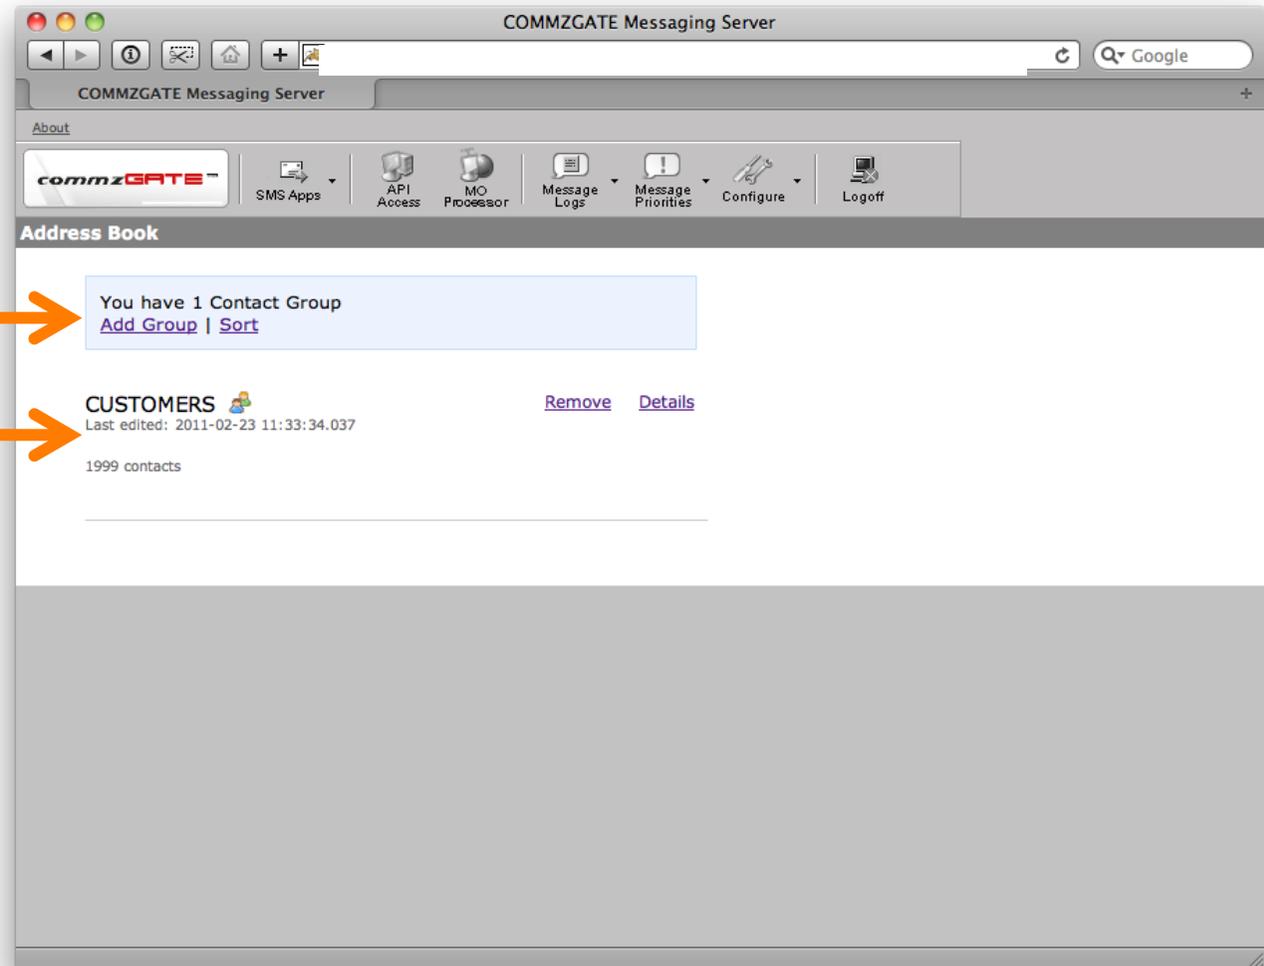

# SMS Apps: Address Book

**Address Book** enables you to upload and organize mobile numbers into groups for easy selection when sending.

This sub-menu allows you to create groups by uploading the recipient info as a CSV file.

Details of each of your groups are shown, including the number of contacts in the group. Click on 'Remove' to delete this group, click on 'Details' to view the contents within the group.

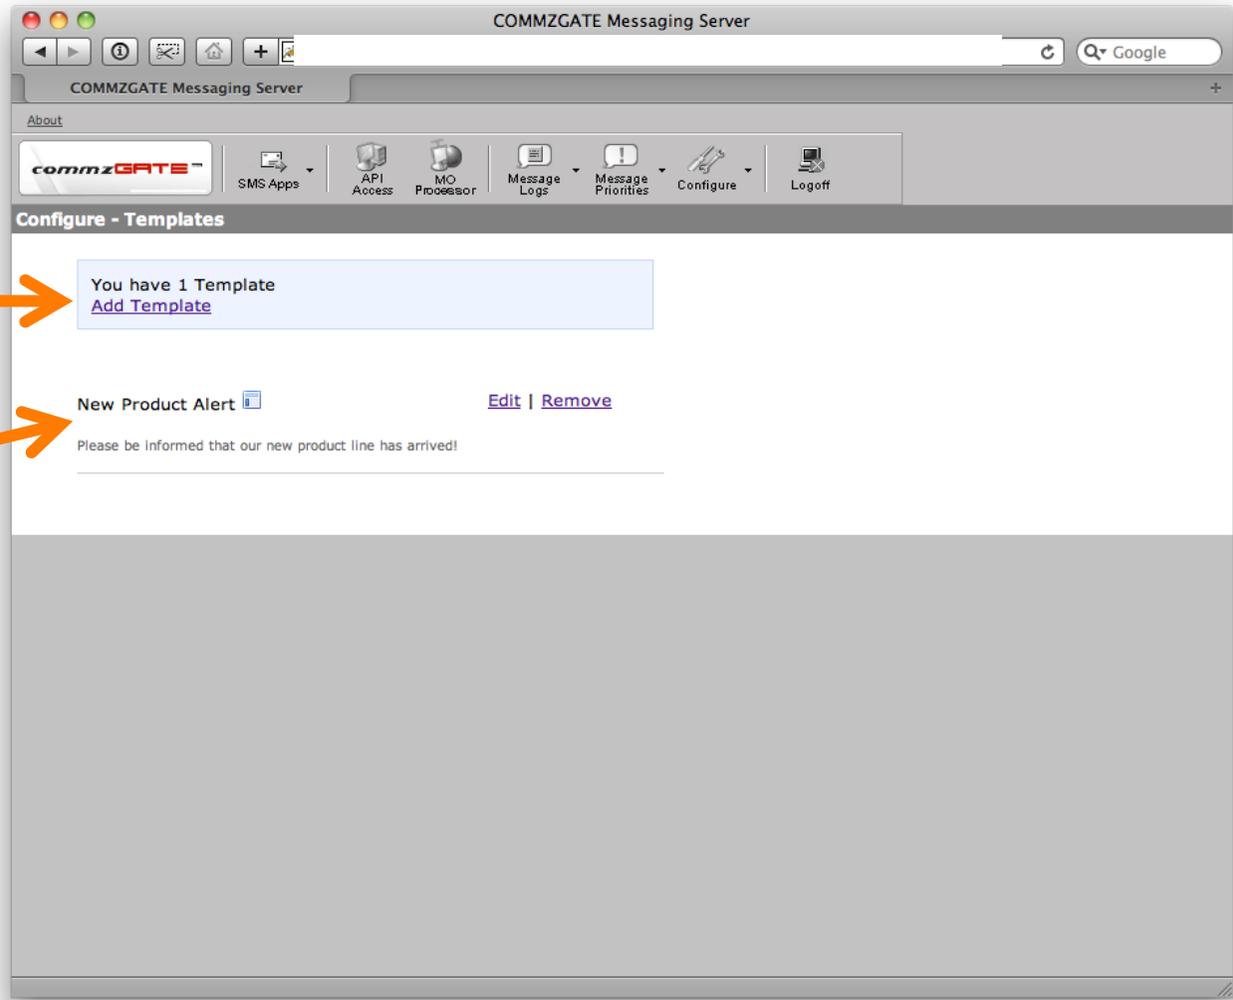

# SMS Apps: Templates

**Templates** store message templates that can be re-used repeatedly from the Web Messenger function.

Create and store as many templates as you wish.

The list of templates you had created is shown here. These can be edited or removed.

# API Access

**API Access** allows you to enable external applications to access the COMMZGATE HTTP API.

You can toggle the API Access function on or off here.

This is the list of API accounts that has been created. Click "Add" to create more API accounts. You can restrict API requests to be coming in from only a specific IP, or use a wildcard \* to allow from any IP address.

The screenshot shows the COMMZGATE Messaging Server admin interface. The browser address bar displays `http://202.157.168.212:8080/commzgate/commz/jsp/admin/apiconfiguration.jsp`. The page title is "COMMZGATE Messaging Server". The navigation menu includes "SMS Apps", "API Access", "MO Processor", "Message Logs", "Message Priorities", "Configure", and "Logoff". The "API Access" section is active, showing the "COMMZGATE API STATUS:" as "on" with a dropdown menu to "Select Mode and click 'Save'". Below this is a table with columns "IP Address", "Access ID", and "Delete". The table contains one entry with IP Address "\*" and Access ID "CommzgateTest". Below the table are links for "Export" and "Import". At the bottom of the configuration area are "Add" and "Save" buttons.

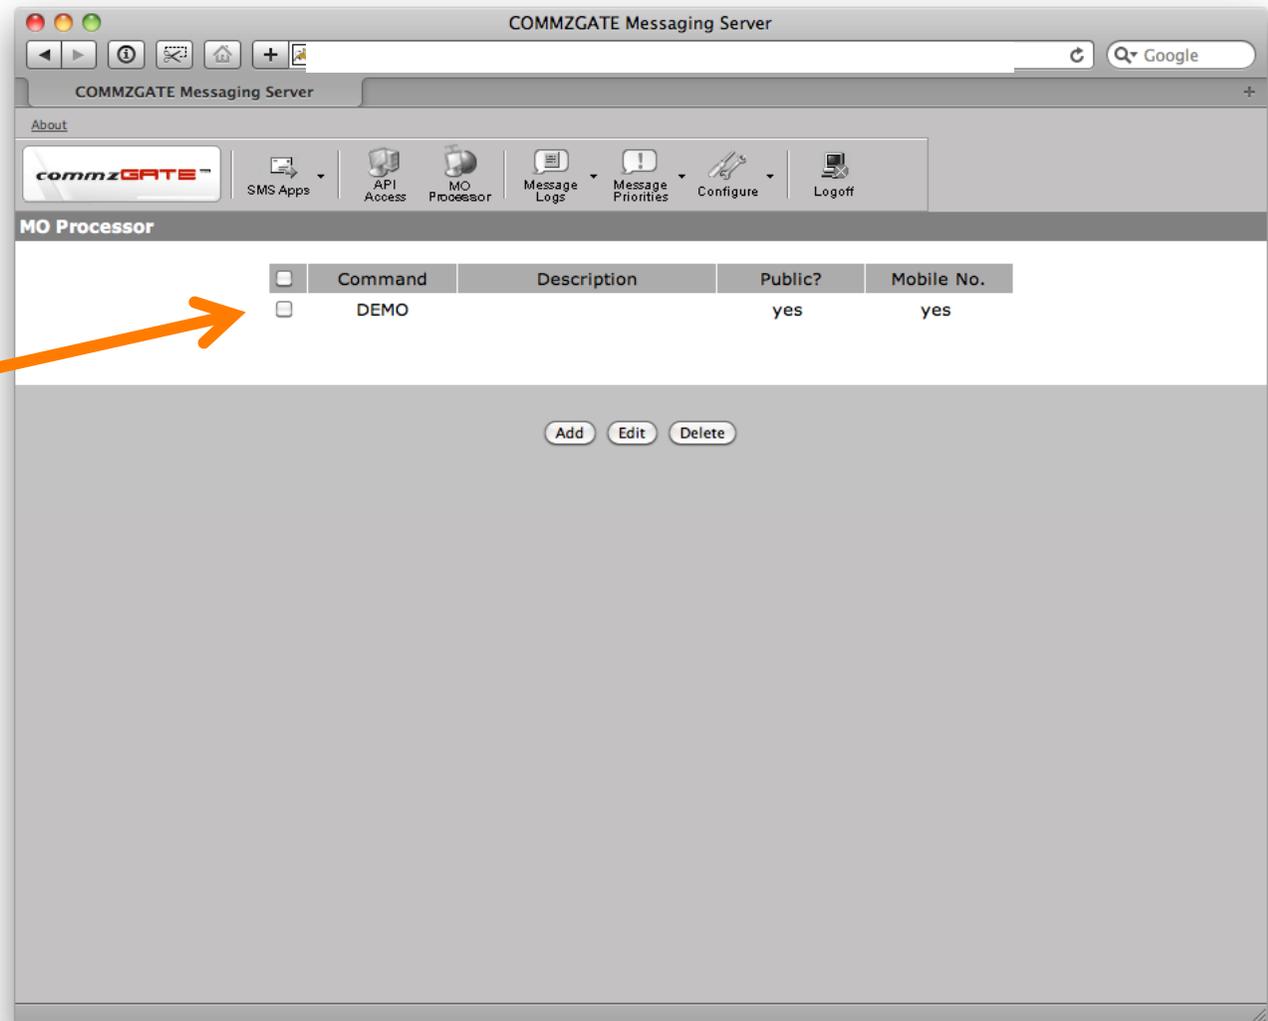

The HTTP API specifications can be downloaded here:

[https://s3.amazonaws.com/commzgate-us1/documentation/API\\_Guide\\_v4.0-release.pdf](https://s3.amazonaws.com/commzgate-us1/documentation/API_Guide_v4.0-release.pdf)

# MO Processor

**MO Processor** enables you to process received SMS MO messages using custom scripts that you create. A “Command” is the first word in each SMS message received and the command received is used to determine which script to execute.

The list of Commands are shown here. Click “Add” to create a new command. In the page to add a new command, specify the URL location of your script. See the MO Processor Guide for more details.

# Message Logs

**Message Logs** contains history of all messages sent and received via the system. Details include timestamp, mobile number, and message content.

The screenshot shows the 'Message Status' application window. At the top, there's a navigation bar with 'Message Status' and a search bar. Below that, a toolbar contains icons for 'SMS Apps', 'API Access', 'MO Processor', 'Message Logs', 'Message Priorities', 'Configure', and 'Logoff'. The main content area is titled 'Message Logs - Received' and features a 'Refresh' button and a pagination control showing '4 Pages' with links for pages 1, 2, 3, and 4. A table lists received messages with columns for selection, S/N, Received Timestamp, Received From, User ID Routed to, and Message. The messages include promotional offers, service announcements, and a test message.

<input type="checkbox"/>	S/N	Received Timestamp	Received From	User ID Routed to	Message

Message logs are paginated into multiple pages if there are many records.

Individual message records can be selected and exported as a text file.

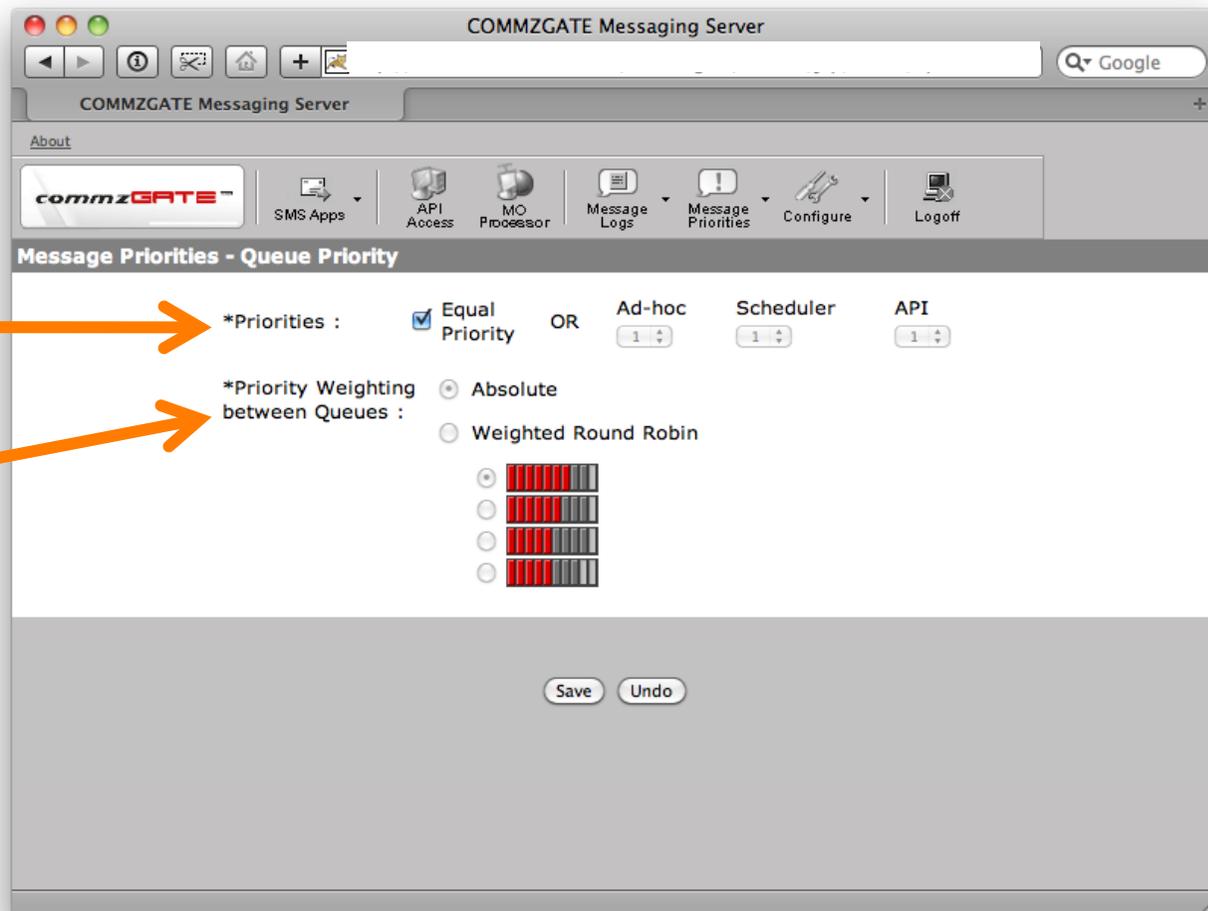

Message Content of each message sent or received are shown. Long messages and multilingual content is supported.

# Message Priorities

**Message Priorities** allow you to set rules on how messages are prioritized. Each system queue can be given a priority, and each queue can also be given a routing rule based on recipient number pattern or Modem ID

You can assign a priority level to each functional queue.

If different priorities are assigned to each functional queue, the priority can be either absolute or based on a weighted round-robin.

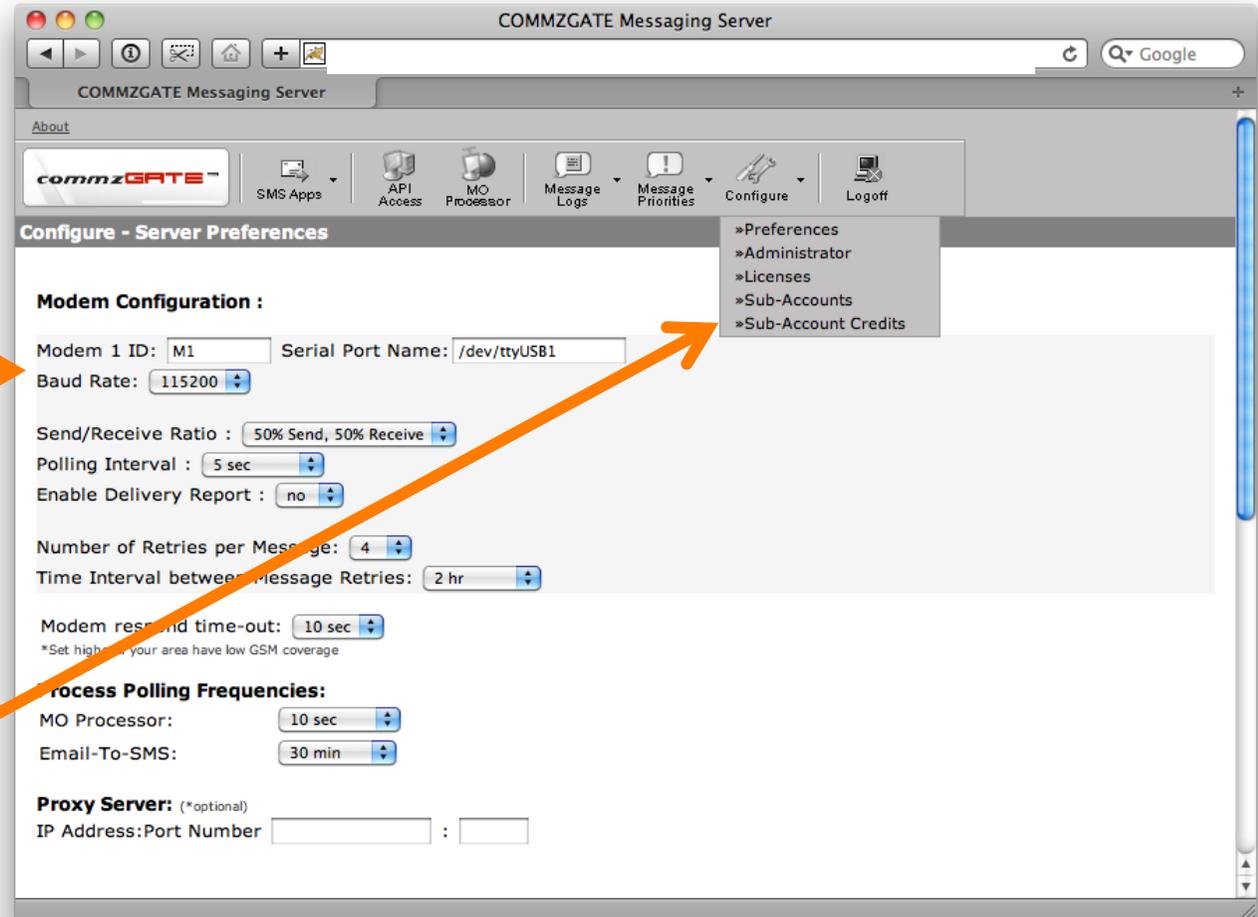

# Configure

**Configure** contains many system settings that you can use to customize your COMMZGATE server, including the modems that you have connected and their messaging behavior.

Configure each modem's ID, port settings, and baud rate. Settings such as delivery reports and retries are possible too.

More configuration options are available under the Configure sub-menu, including sub-account management and License upgrade.
